

INTRODUCTION

The Cashpower Three Phase is a three phase, four-wire, 100 Amp per phase, split prepayment meter in a compact BS housing. The meter is suitable for residential, commercial and light industrial environments. It features a host of standard Cashpower software features, including the ability to operate in credit metering mode. The meter has a display and keypad and can be used as a stand-alone meter or can be converted into a split prepayment meter by simply fitting the customer interface unit with a dedicated two-core communications wire. The meter features a dedicated diagnostics indicator which shows the status of communications to the remote customer interface unit.

This user guide covers the functionality of both the meter and the customer interface unit.
